### Mines and Prospects-Furnaces and Mills

### BIG SCRAP IN OPHIR CANYON

### Keeley Interests Vs. Senator Clark.

Demand Damages in the Sum of Nearly \$2,000,-000 for Ores Extracted.

First Shot Fired in a Conflict Which Has Been Brewing for Many Months.

brower of Chicago, has, with a troop of associates owning interests in Ophir cauyon, Tocele county, this State, trained his guns upon Senator William A. Clark and the Ophir Hill Mining company and against the latter demands treble damages in the sum of \$1.500,000 for ores the defendants are accused of deliberately and wrongfully extracting from the Our Boys and Henrietta mining claims. To enforce this demand complaints that will be fited in the Federal court this morning were perfected by Messra. Dickson, Ellis, Ellis & Schulder, counsel for the Montana Senator's accusers tast night. It is alleged by Mr. Keeley, who was a visitor to Ophir canyon and other diggings in which he is interested last week, that prior to May 2, 1904, the detendants deliberately and mallclously invaded Our Boys territory and upon its ones drew for 5000 tons of the value of \$250,000, and for which, under the statute providing for treble damages, be relatiff in sentilled to \$250000. It is on, Tooele county, this State, trained and upon its ores drew to 1998 to 1988 of the value of \$250,000, and for which, under the statute providing for treble damages, the plaintiff is entitled to \$750,000. It is further averred that subsequent to May 23, 1904, at which time the defendants accoured a half interest in the Our Boys claim, the respondents have extracted 500 tons of ore of the value of \$125,000 and for this an accounting by the Keeley half interest is demanded. It is alleged in the action involving the Henrietta that there was extracted from it 26,000 tons of ore of the value of \$350,000, that under the treble-damage statute entitles the plaintiffs to \$1,000,000, and for this sum the Federal count is asked for a indigment.

The same plaintiffs have lodged a suit before the same tribunal, in which it is rought to enjoin the defendants from further entering Henrietta territory, and in which it is sought to quiet title to the ground.

It was said last night that the scrap has

ground.

It was said last night that the scrap has been brewing for some time. The territory in which trespass is alleged adjoins that of the Ophir Hill Mining company, which was acquired by United States Senator Clark several years ago and upon which he is operating a mill at this time. The conflict between the men of wealth will undoubtedly be a vigorous one.

#### MAINE IN LUCK.

#### Raising a Fortune From His Lease on the Sandstorm.

Sandstorm for the week has re mained the center of interest. The strike on block 6-the Mayne-Macdonald-Sutman lease—it is reported, shows six feet of ore above the 50-foot level. Four feet of this runs \$66 a ton, and the sack sam-ples from the remaining two feet run bet-ter than \$60 as yes the Now (feet). ples from the remaining two feet run better than \$600, says the News of Goldfield. Everything that comes to the surface is sacked for shipment without sorting. They have 400 sacks now on the dump and these go down to the local sampler tomorrow. The ore body shows no signs of weakening. It lies quite flat with an upward strike to the north. This will bring it into number 5 in a distance of forty feet. From number 5 they have put down 400 sacks—twenty tons—and this is now going through the local sampler. The bonanza ore in the vertical shaft opened up to three feet Sunday morning and was brought to the surface by the ton. The character and extent of this ore body is not yet determined. It is thought to be a cross-lead—the same that has appeared in number 6. It will take some days yet to determine this. On this ground they are now running at 320-foot level from the working shaft and are working east and west from the Old Glory hole. From this point everything that comes to the surface pans gold. A full force of men are at work double shift, and altogether the Sandstorm is one of the busiest points in the district.

#### UTAH COPPER ET AL.

#### Early Connection Promised With the All's Well Ledge.

Manager D. C. Jackling of the Utah Copper company, who was at his desk again yesterday morning, after a day in his diggings' boots and among the various properties whose destinies he is shaping, says of them that at each of them conditions are most satisfactory. The drift from the Utah Copper is now within 200 feet of a connection with All's Well workings in Ohio Copper company's ground. It is his intention to sink a shaft on the All's Well ledge within the next fifty feet, and through this will draw upon the ore bodies exposed on the 300-foot level. These ore bodies occur in considerable volume, the metallic contents showing from 2 to 30 per cent copper. The second-class will go to the mill, the first-class will come to the furnaces as it is taken out.

On the Blingham Central, the Whipley tunnel is now in 400 feet and is forging shead with two shifts, while the Jeff Davis has penetrated the zone for 60 feet. 170 feet of this having been driven under the present regime. Copper company, who was at his desk

under the present regime.

The work in Ohio ground, under the option, is progressing in the copper-bearing porphyry and along lines originally projected.

#### IN BEAVER REGION.

#### Lorin Morrison Discusses Some of Its

Undertakings.

Undertakings.

Lorin Morrison who, with his brother, has been adding the Indian Queen group to the list of Beaver county producers, is up from the south again, and while declining to discuss it in detail, acts like one who has a fascinating story up his sleeve. Of his neighbors, the Frisco Contact and Lulu. Mr. Morrison says there is no doubt in his mind that Manager Rohlfing will add each of the undertakings to the producers of that region before the close of the year. That he is on each end of the Horn Silver and that the lode which has been productive of over \$40.000,000 extends in each direction through his territory has been quite conclusively established, so that the tasks before him are of the simplest. At the Horn Silver the output of concentrates from the zinc plant is steadily increasing, while the tonnages of zinc ore now being forwarded to the smelter at loia. Kan., are quite heavy. Mr. Morrison will leave for camp again in a few days.

#### THE DAY ON 'CHANGE

#### New York and Con. Mercur Promi nent Among the Traders.

The day on the mining exchange closed on the sale of 66,372 shares of stock, for which \$9238.39 was paid and with the market quite active notwithstanding its weakress at intervals. New York, which hadbacked up to accommodate a line of customers the previous day, turned its nose
up the pike and advanced to 68 cents,
while Cop. Mercur, on favorable reports
brought in by its manager, recorded a
transfer at 47, with Boston Con. changing
lands around \$3.20. Mammoth, on a rumor that it would be unable to appear in
the divident column until August, was
marked down to \$1.11%, while Lower
Mammoth closed on a transfer at 28 and
Columbus Con. on one at 70. May Day
was slaughtered and in the tremendous
unloading was reduced to 8% cents, although it closed on a transfer at 9, while
Butler-Liberal responded to a bid of 12,
with Carisa changing hands around 18
and Uncle Sam at 31, the day closing on
the following market:

A. M. Call. || P. M. Call. cet quite active notwithstanding its weak A. M. Call. || P. M. Call. Bid. |Asked.|| Bid. |Asked

Ore and Bullion. In the ore and bullion market the day's settlements amounted to \$31,400, McCornick & Co. reporting them as they follow: Bullion, \$33,500, gold bars, \$4900; gold. silver, lead and copper ores, \$37,200. In the metal market silver ruled at 55% cents an ounce, lead at \$3,50 to \$4,50 per hundred pounds and casting copper at 14% cents a bound.

## IMPORTANT FIND ON GIBRALTAR

### Discovery Made Ledge No. 4.

### Conservative Estimates of Value Placed at \$500 a Ton.

Recent Developments Seem to Justify Claim That Bonanza Mountain Is Mountain of Gold.

#### BY STAFF CORRESPONDENT.

RHYOLITE, Nev., June 20 .- A strike of considerable importance was made a few days ago on the great Gibraltar property here. Superintendent Nelson, while prospecting along ledge No. 4, discovered that the ledge carried very fine specimens of free gold ore.

The point at which this discovery was made is about four hundred feet in a straight line above the mouth of the main tunnel, and at least five hundred feet above the level of the towns of Bullfrog and Rhyolite. The ledge at this particular locality is of extreme width, surface croppings clearly indicating that the width will attain at least thirty feet. Paralleling, one another across the east

side of Bonanza mountain, which comprises a portion of the Gibraltar Mines Syndicate property, are six distinct ledges of great length and siriking width. of great length and striking width. At almost any point where these ledges outcrop gold values can be found, either by panning or by assay. Of these ledges, No. 4 shows up more prominently at present, by reason of the find just made known. Ledge No. 4 can be traced across Bonanza mountain for over 1300 feet, and at any point gold of milling value can be found. The ore discovered yesterday is shipping ore, and pans well into the hundreds per ton. Conservative estimates have placed the value at \$500, and some exceedingly fine specimens were taken out.

#### No Rush About Shipping.

No Rush About Shipping.

It will not be the policy of the company to begin sacking and shipping ore at the present time, as the tunnel which is in over a hundred feet will strike the ledge at the proper time, it being the plan to cut all six ledges by means of the tunnel.

To find free gold ore cropping out of Bonanza mountain on the eastern slope is good news for Bullfrog, but such has been confidently predicted and expected by all who have gone over that magnificent mountain. On the Great Eastern property, several hundred feet north of the Gibraltar ground and on the same slope, very fine free gold ore was found recently. This discovery of rich shipping ore was made by lessees, and paved the way for the purchase of the Great Eastern by John McKane, a deal being made last week.

Bonanza mountain contains such great

Bonanza mountain contains such great properties as the Tramp, Denver and Eclipse groups, on all of which shipping

#### Traced Great Distance.

Beginning at the spot where the find on ledge No. 4 occurred the ledge can be traced a great distance north and south. The ledge is especially exposed within a distance of 160 feet, and even the rhyolite will pan colors. The vein itself when expessed for a few feet is a very fine quality of quartz; the gold itself is fine, and the fact that strictly specimen ore can be found would tend to enhance the true value.

Within the past month great improve-Within the past month great improvement has been made all over the Bullfrog district, more noticeable to a person returning after an absence of that duration. Development work has been faithfully carried on, and the district looks better than ever. Talk about the district thinning out is all bosh, and Bullfrog is destined to be the greatest, largest and richest mining country in the world.

Some time ago, while inspecting the country the writer ventured the online that ledges showing such extreme outcrepping length and breadth as this district contains would be of great depth. This is shown in many instances, as ledges have uniformly increased in width and richness as the depth increases. The most striking instance is on the Shoshone mine, the great ledge at 100 feet has increased one-fourth in value.

Bonanza mountain is increasing daily its right to the title "A mountain of gold," given it by a party of experts early in its history.

### ALKALI IKE GONE.

#### Says Rhyclite Is the Worst Place on Earth for Him.

Alkall Ike is gone. The place that has known him so long, alas! shall know him perhaps no more forever. Laden with

perhaps no more forever. Laden with the fag end of a week's booze, and a pair of thin blankets. Alkail has hiked out for more congenial parts.

Employed by Borax Smith for years, from the time when the memory of man runneth not to the contrary, on the desert and other congenial locations, lke has naturally drifted into the mines, and into habits so easily formed when a man in such a country has no one depending on him, and no more weightier problem on his hands than the semi-monthly disposal of the funds arising from his physical efforts. For a while Rhyolite contained all that is mortal, and what may in time prove immortal, of this interesting character, and Ike, as if in return, has very nearly succeeded in containing all that is liquid in the camp, but he has passed up the camp and district in disgust.

Admired Strong Drink.

Admired Strong Drink. Admired Strong Drink.

His admiration for a whisky capacity is most generously and without deviation shown in the desire to test or satisfy that capacity, whether his own or inat of another, and no clubman ever invited the fellows to whisky and sods at the side-board with a more gracious demeaner than Alkali Ike used to roar his invitations to the boys to "belly up to the trough and swill some forget-me-nots."

Ike's money was good, being earned underground, poking mother earth in the ribs with a cold steel, and no one ever refused his money, but his credit did not stand at par, and when broke there was nothing left for Ike to do but sober up and resume the tickling process.

When Ike Celebrated.

When Ike Celebrated. For a week like's stock has not suffered on account of the general depression of the market. In fact, it raised several points until lks took on the wealth of a Sheshone and a cargo of the red liquid

## for Better Outlet

Inhabitants of Alta to Demand Some Consideration for the Taxes They Pay.

The population of Alta, the diggings which camp are contributing not a pelieves it entitled to more liberal treatment than has been accorded it by the county's commissioners, and to emphasize ment than has been accorded it by the county's commissioners, and to emphasize it has prepared a petition in which the betterment of the road between the producers of that camp and the valley smelters is asked for. This petition will be presented to that body at once, and an effort made, said Postmaster John Stilwell, who arrived from camp again on Monday night to secure, without delay, the action to which the petitioners believe themselves entitled. At present there are upon the payrolls of the camp nearly 400 persons, a cluster of companies are sending the output of their mines and mills to the furnaces under trials that incitr the greatest difficulties, without reference to costs, the merchant and manufacturer are each finding market for their wares, and yet practically nothing has been done by the county to make this possible. Certainly the camp is responding to the demands of the tax collector and is entitled to at least as much consideration as that extended the honest farmer.

Of the mines Mr. Stilwell says not a

of the mines Mr. Siliwell says not a shot is fired into the ledges that does not improve their condition. While there has never been any doubt concerning ulhas never been any doubt concerning ultimate developments in the properties of the Albion Mining company, the disclosure on the tunnel level is the sensation of the hour, and with an open road the reimbursement of those by whom nearly \$100,000 has been expended in the opening up of the territory should be along the most rapid lines. Of the consummation of the City Rocks deal, which is being promoted by W. J. Craig, Mr. Stilwell has no doubt, while several others of similar nature are moving to a favorable termination, and should be followed by much new blood.

# Will Sink to

Golden Crown of Tonopah to Fathom Its Riches Under Management of Donald Gillies.

ent of the Golden Crown mine at Tone ment of the Golden Crown mine at Tonopah, for which a large sum was recently dealt out by him and his associates, having been completed, Adrian C. Ellis, Jr., came in from that Nevada camp yesterday to await results. During his absence the exhaustive study of the property which gutedated its purchase was repeated, and that a large volume of wealth awaits development in the territory Mr. Ellis has not a doubt whatever. Under a contract for which bids have been solicited, and under the experienced management of Donaid Gillies, the shaft, now at a depth of 115 feet, will be dropped down 50 feet deeper, at which level a crosscut will be run to the ledge, and in all probability the extraction of ore begun at once. This work will begin before the close of the month.

Of Tonopah, Mr. Ellis says it is growing very rapidly. Many substantial business structures are being erected, as is also a county courthouse. Of the former, one is to cost as much as \$5,00, while all of them will be constructed of a most beautiful variety of stone which is obtained from quarries not distant from the camp.

The railroad has been practically broad gauged with the exception of a link about four miles in length. The only thing necessary to complete the broad gauging of the Tonopah branch is to move one of the rails and to respike. This, it is said, can be accomplished in twenty-four hours after the work shall have been undertaken. For the Goldfield extension, grading has now been completed and is waiting on ties and the laying of tracks. oah, for which a large sum was recently

vaiting on ties and the laying of tracks Mr. Ellis reports the condition through-Mr. Ellis reports the condition as most out the camps of that region as most gratifying, with even bigger results gratifying, with even ahead of their inhabitants.

#### AT NEWHOUSE MILL.

#### Four Thousand Tons Reduced at Big Plant Last Week.

Plant Last Week.

The week's log with which Mill Manager Bettles returned from the big concentrator at Newhouse yesterday morning, certifies to the reduction of no less than 4000 tons during that period, and of which about six tons of crude were converted into one of copper, gold and sliver-bearing concentrates. The Hancack Jig, first of a battery of the huge machines with which the capacity of the plant is to be augmented is now being installed, and will go into commission about the 10th of July, and with this the management expects to experience no difficulty in increasing the daily reduction to at least 800 tons. Not a unit in the gigantic plant but is at this time doing its work up to requirements, and as soon as it shall be demonstrated that the new type of Jig is what is desired, work will begin on the projected enlargements. For the cluster of new dwellings with which the camp is to be studded, lumber is now arriving on the ground, construction to be along the most energetic lines.

MR SHAFFER ARRIVES.

#### MR. SHAFFER ARRIVES.

#### Purchaser of Mystic Shrine to Inquire Into Developments.

Fred G. Shaffer, president of the Intermountain Mining and Industrial association, with headquarters at Denver, is in the city, to give his attention to local interests. With the results of the campaign at the Mystic Shrine of Bingham, the properties of which company were recently added to his acquisitions, Mr. Shaffer expresses himself as very much pleased. Since it was added to his association's interests and under the direction of L. J. Morser, it has been paying its own way and providing the moneys with which to discharge its own bills. A recent shipment of copper, gold neys with which to discharge its own bills. A recent shipment of copper, gold and silver-bearing ore from the property netted the company \$859 per carload, while another is now at the sampler. Mr. Morser, who was in the city yesterday, announced the appointment of John Me-hollin, late of Colorado, as foreman of the properties.

equal to his fondest dreams of years equal to his fondest dreams of years, and then came the collagse. The friends who had spent so much time so kindly assisting Alkali Ike to count his money refused absolutely to become interested in the search of a deficit that Ike suspected was the case financially, and which he knew existed in the aforementioned whisky capsoffy. Without bidding farewell to his most intimate friends of the fram seasons. Ike gathered his slender possessions in a pack and quietly began the task of transporting his capacity across the desert on foot.

Worst Place on Earth

#### Worst Place on Earth.

"Rhyolite is the worst place on earth for me," Ike confided to a former foreman. "I cannul says money here, why, icarly every fellow I meet borries \$5 or \$10 and how can I saye?"

So nothing remains of Alkali Ike, about the only thing he left behind him was a little cloud of dust which soon settled as if heedless of the fac' that a friend of thirty years' standing was hiking it into the face of interlopers whose borrowing he face of interlopers whose borrowing ropensities had driven him into the next

### **BOSTON TALENT** BIDS FOR APEX

of the Utah-Apex company, embracing
213 acres upon the great copper, gold and
silver-hearing zone, and that are controlled by interests in this city, New
York and London. The proposition is addressed to the shareholders by the purchasing syndicate through Hayden, Stone
& Co., the Boston brokers, on the followlag terms.

"To the American stockholders of UtahApex Mining company. By authority, we
hereby offer the sum of 25 cents per share
for the right to call 256,600 shares, this
being the controlling interest of the Utah
Apex Mining company at 37,50 per share,
any time before July 1, 1998. Conditions
If you desirs to avail yourself of a participation in this offer kindly deposit the
shares standing in your name on or before July 1, 1995 (after having filled out
and signed the irrevocable proxy and option herewith attached), with the International Trust company, corner Devonshire and Mill street, Boston, Mass, who
will give you a receipt for the same and
you, on deposit of 250,000 shares, will receive a check for 25 cents per share for
the number of shares deposited by you.
We desire to point out that by the deposit of your stock (and provided 250,000
shares are deposited), the depositors will
receive the coming year a return equal to
5 per cent on the par value of their stock
and if the option is exercised they will
receive a further profit of 50 per cent on
the par value of their stock. We reserve
the right, if 250,000 shares are not deposted by July 29, 1905, to return the shares
which have been deposited.

"HAYDEN STONE & CO."

The circular tells its own story, and
those who desire to avail themselves of
the proposition have but to pay for the
costs of transmission to the trust compary designated by the brokers.

There has been considerable ore developed in the properties at Bingham

# Struck It Rich

Samples of Ore From the Property Create Big Surprise in the House of Tibbals.

Samples of ore from the Ohio Girl group of locations at Goldfield that was recently placed by William H. Tibbals of this city with a New York syndicate, and upon which the first payment has been dealt out, show not a little free gold and indicate a possibility as big as any in that region of gold. They were obtained from an open cut which has been extended across the ledge, which is no less than sixty feet between walls, according to the report of those in charge of operations, and while an average has not been arrived at, there is much to foretell a satisfactory one. Meanwhile a survey of the territory has been completed and with a well-filled treasury the company will begin to prosecute its developments along the most vigorous lines. In the placing of the property not a small interest was retained by Mr. Tibbais and his associates in this city. Asand indicate a possibility as big as any a small interest was retained by Mr. Tibbais and his associates in this city. Assays from which the returns were certified to Mr. Tibbals during the afternoon showed the presence of \$158.89 gold, with one and a half ounces silver per ton. As a sample from the entire ledge the returns are astonishing and results were forwarded to the interests in New York at once. The letter accompanying the samples says they were from a portion of the big vein hitherto unsampled, and work upon it will follow at once.

#### MINING AT MODENA.

Many Opportunities Held Out to the Experienced Mining Man. necial to The Tribune.

MODENA, Utah, June 20.-Although Modena p to the present has never attained any celebity for its mineral possessions, yet there are

MODENA, Utan, June 23.—Although Meccans up to the present has never attained any celebrity for its mineral passessions, yet there are unquestionable evidences of rich mineral values within fifteen minutes walk of the town. A few thousand dollars, perhaps, may have been spent upon the different claims in this vicinity, while hundreds of thousands have been sunk in mining properties with no better, if as good, indications as can be found here. Five years ago there were some claims located here, mostly by employees of the railroad, but aside from the assessment work there hus been practically nothing done.

R. L. Nolfe, who was among the first to locate here, is just as condicint today of the riches that are awaiting some one as he was when he first traversed the foothills of the mountain ranges west of the town. His faith in Modena's becoming a great mining camp is just as strong if not stronger today than ever. All that is required is capital to develop the mines which so far have only been worked in a fragmentary way. If some of the capitalists who are passing through would stop over a day or so and take a constitutional to the hills from one to two miles distant. If they possess any knowledge of mineral indications, they would not book much further for an investment. If the mines here are ever operated the san Pedro would doubtless he only too glad to run a little spur to them, which would make it profunds to ship even a much lower grade of ore than has already been found in the Desert Wonder group of claims. Mr. Noife, who is at present working on one of the claims of the group, showed your correspondent a sample of ore which he encountered at a depth of twenty feet, about the size of a goone egg, which glittered with silver and which he helleves will go at least 130 cunces if not better. From another of his claims to recently sent samples of ore to Denver which gave values of \$19 per ton in Iron, besides several claims of the Desert Wonder group will go from 80 to 66 per cent fron, besides the silver and goo

#### BACK FROM BODIE

President Holbrook of Grand Central Sees Gold Property.

Lafayette Holbrook, president of the Grand Central Mining company of Tintic, has returned from Bodie, Cal., by way of Tonopah and Goldfield. Nev. The new Bodie Mining company said he, is dropping ten stamps on a nice quality of goldbearing ore, and to this will add a cyanide plant in a short time. At Tonopah he was permitted to look in upon the wealth of the Montana company's mines, with the extent of which he was very much astonished. At Goldfield he visited the Sandstorm, in which Utah tajent is largely interested, and says he saw one of the most remarkable disclosures of wealth in his experience as a miner. In the leases upon this sensational performer. Utah is represented by Scott Crismon and A. H. Mayne, each of whom is adding rapidly to his estate. Mr. Holbrook was astonished at the rapid growth of Goldfield and expresses his intention of returning there in a short time.

#### Mining Notes.

A carload of second-class ore left the Victor Con. of Tintle yesterday for the valley smelters.

William Hatfield of the Albion is back from that Alia property, quite enthusias-tic over its condition. John A. Kirby, the expert mining man, has returned from Nevada, after making an examination of mining properties.

Frank Janney, superintendent of the Utah Copper company's mill, was among the visitors from Bingham yesterday. Thirty tons of B. W. & H. ore, just sold upon the local market, brought the owners of that property out of Richfield over \$50. Capt. Henry Stern, president of the Tin-tic company, left for the company's Yam-pa mines and smelter at Bingham yes-terday morning.

L. A Jeffs has gone into the diggings to inquire into the condition of various interests that promise to begin his active enrichment the present year.

The broken fitting at the Daiy West mill has been replaced by a new one, which arrived yesterday, and the plant will go into commission again in the next few hours. The management of the Ohio of Bing-

ham marketed three more carloads of concentrates during the day, the settle-ment sheets showing big percentages in copper, with some silver and gold. Circulars instructing local shareholders how to subscribe for atock in the United States company's additional issue have reached the city. They conform to what has previously appeared in The Tribune. The condition of George H. Robinson, managing director of the Tintic company, has improved to an extent that he will undertake to leave the sick room for his apartments in the hotel the present mostly.
